

**EuroClone S.p.A**  
is currently active  
worldwide  
in **Biotechnology area**  
(Cell Biology, Cytogenetics,  
Genomics and Proteomics,  
Immunology and  
airborne contamination  
control systems)  
and **Diagnostics area**  
(Human, Agrofood and  
Veterinary).

## Target

Track all the material, available for researchers, stocked in warehouse, in order to refill the warehouse.

## Project

The solution is provided by Aton's onID middleware integrated in the customer IT systems.

Glass tubes and people are coded by RFID Tags and controlled during all operations. The system has to filter readings (e.g. filtering not required items and/or multiple passes through gate) and to upload on the ERP only certified data.

## Benefits

RFID is a solution that enables to pinpoint the collection of the material and the restitution, making the supplying of the materials more easily and correct.
